
SOLUTION BRIEF

ArmorPoint DataView.

ArmorPoint DataView is a secure, self-service portal designed exclusively for organizations who have concluded their Managed SOC service but still need to access historical security event data. Whether for compliance audits, internal investigations, or executive reporting, ArmorPoint DataView ensures you maintain visibility long after your active monitoring concludes.

Why choose ArmorPoint DataView?

→ ACCESS HISTORICAL SECURITY EVENTS ANYTIME

Search and review alerts, incidents, tickets, and vulnerabilities generated during your Managed SOC service period. Everything is accessible in the ArmorPoint Platform.

→ SUPPORT REGULATORY AND INTERNAL COMPLIANCE

ArmorPoint DataView helps meet data retention requirements for standards such as PCI DSS, HIPAA, and CMMC, as well as internal governance policies.

→ RETRIEVE RAW LOG DATA WHEN NEEDED

Request raw log data, such as Windows Event Logs, Network Device logs, and/or Agent Performance logs through a Data Retrieval Request Ticket in the ArmorPoint Platform. Our team aims to restore the data within a 24-hour target window.

What's Included

- → Self-service access to historical alerts, incidents, tickets, and vulnerability data
- → Request-based access to raw logs stored in cold storage
- → Targeted 24-hour response target for data restoration requests
- → Data retention based on your original Managed SOC contract terms

What's Not Included

- → Real-time alerting or monitoring
- → Ingestion of new log sources
- → Custom investigations or analyst support
- → Forensics or recovery from malicious client-side actions
