

Cloud Detection.

Scalable Solutions for Evolving Cloud Environments.

ArmorPoint's Cloud Detection solution offers comprehensive visibility and control over your cloud infrastructure, empowering your security team to detect and respond to threats in real-time. Experience unmatched protection and performance optimization tailored to your evolving needs.

CORE OUTCOMES

- Gain comprehensive visibility to identify and monitor potential threats that traditional on-premises tools might miss
- Effortlessly scale detection capabilities, adapting to changing workloads without additional hardware investments
- Continuously monitor cloud resources in real-time to swiftly detect and respond to potential security incidents
- Utilize automation to isolate affected resources, revoke access, and apply patches, reducing remediation time and damage
- Manage security events and alerts from various cloud services through a centralized dashboard, integrating cloud and on-premises security logs
- Meet regulatory requirements with detailed logs, audit trails, and customizable compliance reporting

CLOUD INTEGRATIONS

and many more...

How Cloud Detection Works.

STEP 1	DATA COLLECTION	→ The ArmorPoint Cloud Detection solution collects data from various sources within your cloud environment, such as cloud service provider APIs, network traffic, endpoint data, user activity logs, and application logs.
STEP 2	DATA AGGREGATION	→ Data can be collected and stored using various methods but eventually will aggregate and be stored in ArmorPoint's in-house SOC 2 Type II datacenter, ensuring reliability and avoiding outages common with AWS or Azure storage instances.
STEP 3	DATA ANALYSIS	→ ArmorPoint uses behavioral analysis, machine learning, signature-based detection and threat intelligence integration to analyze the data and identify potential threats.
STEP 4	COMPLIANCE	→ Demonstrate adherence to industry regulations and standards with audit trails and prebuilt and customizable compliance reports

Stay Ahead of Threats with ArmorPoint Cloud Detection.

Leverage ArmorPoint's cutting-edge Cloud Detection solutions to achieve unparalleled protection and visibility of your cloud infrastructure.
