

Endpoint Threat Analytics.

Elevate Endpoint Security.

ArmorPoint's Endpoint Threat Analytics revolutionizes endpoint security by providing unparalleled insights into endpoint behavior. Our advanced analytics ensure robust protection against cyber threats, enhance overall security, and optimize endpoint security, empowering your organization to stay secure and resilient.

CORE OUTCOMES

- Improve incident response by quickly determining the scope and impact of attacks, identifying affected systems, and taking targeted actions
- Gain real-time, comprehensive visibility of all endpoint activities to identify anomalies and potential breaches
- Capture and store extensive endpoint data for thorough forensic investigations and attack reconstruction
- Continuously adapt security strategies based on evolving threats and insights from endpoint data

▲ ArmorPoint's ArmorAgent provides access to an analytics dashboard with log data.

How Endpoint Threat Analytics Works.

STEP 1	DATA COLLECTION	→ Collect system events, user activities, network traffic, file changes, and system configuration changes.
STEP 2	DATA TRANSMISSION	→ Transmit collected data to ArmorPoint.
STEP 3	BEHAVIORAL ANALYSIS	→ Conduct behavioral analysis, machine learning analysis, threat intelligence integration, and signature-based detection to identify anomalies and threats.
STEP 4	THREAT CLASSIFICATION	→ Classify and prioritize detected threats based on severity and potential impact.
STEP 5	CONTINUOUS MONITORING	→ Continuously monitor endpoint activities and refine detection capabilities based on new data and evolving threats.

Take Control of Your Endpoint Security.

Empower your security team with ArmorPoint's advanced Endpoint Threat Analytics. Gain unparalleled insights, improve incident response, and stay ahead of cyber threats with our comprehensive and scalable endpoint security solutions.
